Azure Artifacts

- A package management solution integrated with **Azure** DevOps
- Allows you to create and share npm, Maven, Pip and NuGet packages via feeds
- A package can be public and private to an organization
- Allow you to cache packages that your applications are dependent on inside your own feeds
- Allows you to publish your own internal packages

Publish Internal Package

```
<?xml version="1.0" encoding="utf-8"?>
<configuration>
  <packageSources>
    <clear />
    <add key="ProjectDependenciesFeed"
value="https://pkgs.dev.azure.com/dnttestorg/ECommerceApp/_packaging/ProjectDependenciesFeed/nuget/v3/in
dex.json" />
  </packageSources>
</configuration>
```

```
> dotnet pack
```

```
> dotnet nuget push bin\Debug\DNTMyPackage.1.0.0.nupkg --source ProjectDependenciesFeed --api-key somevalue
--interactive
```
